

# BASIC MODULE

THE BASIC TRAINING OF VIRTUAL COMMISSIONING  
WITH THE **RF::Suite®**

## VIRTUAL PLANTS

## VIRTUAL COMMISSIONING

## REAL TRAININGS

## RF::Suite®

### GOALS

The training environment of EKS InTec GmbH offers you an individual build-up of knowledge with the software RF::Suite for virtual commissioning (VC).

Benefit from our practice-oriented basic training and learn how to use the RF::Suite to achieve optimum benefits through VC. Through the combination of text, speech and screencasts, sustainable learning success can be expected.

This interactive training provides you with an overview of the RF::Suite software landscape. You will be introduced to all necessary functions of the software for the VC. These include, for example, the creation of projects, the coupling of the individual systems and the correct handling of the VC system. Each participant creates his own VC model, which enables intuitive knowledge building.

Additionally you will get access to our EKS-HUB. Here you will be introduced to new features and advanced content by means of short screencasts.

### CONTENT

Setup, coupling and commissioning of a virtual plant using the **RF::Suite®**:

- RF::ViPer | RF::YAMS | RF::RobSim | RF::ABBConnect
- RF::FANUCConnect | RF::MAX² | RF::TiaExporter
